

S1 · Same counters, raw counts, coverage-period effects (pre-registered) — point $\times 1.90$, $P(\geq \times 1.8) = 0.72$

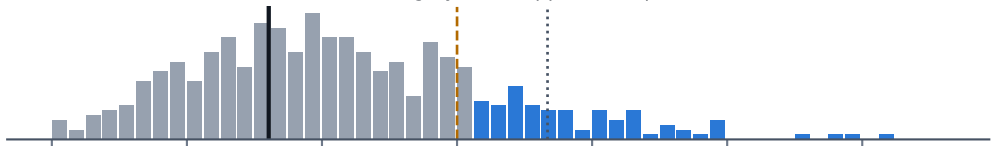

S2 · Same counters, counts $\times$ city correction factors — point $\times 1.83$, $P(\geq \times 1.8) = 0.56$

S3 · Same counters, two 2019 device swaps as breaks — point $\times 1.73$, $P(\geq \times 1.8) = 0.24$

S4 · Chain-linked over all counters, outage years skipped — point $\times 1.52$, $P(\geq \times 1.8) = 0.21$
