

S1 Same counters, raw counts, coverage-period effects (pre-registered)
point $\times 1.90 \cdot P(\geq \times 1.8) = 0.72$

S2 Same counters, counts x city correction factors:
point $\times 1.83 \cdot P(\geq \times 1.8) = 0.56$

S3 Same counters, two 2019 device swaps as breaks
point $\times 1.73 \cdot P(\geq \times 1.8) = 0.24$

S4 Chain-linked over all counters, outage years skipped
point $\times 1.52 \cdot P(\geq \times 1.8) = 0.21$

1.2 1.4 1.6 1.8 2.0 2.2 2.4
growth ratio 2012→2024 (bootstrap draws; dashed $\times 1.8$, dotted official $\times 1.93$)
